Waterless Manicure and Pedicure Available Now At Tranquility - The Spa At Lake Lanier Islands Resort

Just because we are in a drought doesn't mean your hands and feet have to look as dry and parched as the excessively exposed shoreline of most of Georgia's lakes. Reward yourself and still be a water conservationist with a waterless manicure and pedicure from Tranquility - The Spa at Lake Lanier Islands Resort.

Besides helping our environment, the waterless manicure and pedicure can actually help polish to stay on longer with natural nails. Nails swell when they are immersed in water and expand at the free edge. As they dry, the nails contract and shrink, which can cause polish on natural nails to crack and peel quicker. Keeping the nail dry during a manicure or pedicure actually helps to maintain chip-free polish and your fingers and toes looking fabulous longer.

Soaking your hands and feet has always seemed like a part of the pampering process of getting your nails done. Your fingers and toes immersed and comforted in a tub of warm water. However, did you know that while soaking will soften your cuticles, the water actually dehydrates rather than providing moisture? Skipping the soaking can also save you time in the salon, keeping your schedule on track for all the demands of your day. Tranquility - The Spa, open Tuesday through Sunday, welcomes the members of the local community to enjoy individual treatments as well as complete packages that offer the ultimate experience in pampering. Pre-booking your appointment waives the front entrance gate fee for your spa service.
